Below are details of the partner organisations and teams involved in the Arch-Manche project along with a list of key external organisations and personnel. This is followed by information on the technical report authors. This project has been part funded by the European Regional Development Fund through the INTERREG IVA 2 Seas Programme. This report reflects the authors’ views. The INTERREG IVA 2-Seas Programme Authorities are not liable for any use that may be made of the information contained therein.

We would also like to thank Wilde Petrone and Céline Van Den Abeele from the INTEREEG IVA 2 Seas Programme for their help and support during the project.

1. Partner Organisations and Staff Teams
The Arch-Manche project was led by the Maritime Archaeology Trust in the UK in partnership with the Centre National de la Recherche Scientifique in France, the University of Ghent in Belgium and the research institute Deltares in the Netherlands.

Maritime Archaeology Trust
Julie Satchell
Lauren Tidbury
Garry Momber
Phillipa Naylor
Jasmine Noble-Shelley
Kathryn Dagless
Stephen Fisher
Julian Whitewright
Virginia Dellino-Musgrave

Centre National de la Recherche Scientifique
Marie-Yvane Daire
Catherine Dupont
Gregor Marchand
Catherine Le Gall
Francis Bertin
Jean-Baptiste Barreau
Laurent Quesnel
Vincent Bernard
Pau Olmos
Chloe Martin

University of Ghent
Tine Missiaen
Iason Jongepier
Katrien Heirman
Dimitris Evangelinos
Jeroen Verhegge

Deltares
Peter Vos
2. Steering Committee
In order to ensure that the project was on course and that the outputs were relevant, disseminated and applied each partner evaluated the project through a steering committee. The members are listed below:

Samantha Cope, Channel Coastal Observatory, National Oceanography Centre
Peter Murphy, English Heritage
Yves-Marie Paulet – University of Western Brittany (UBO) and Institute of Marine Studies (IUEM)
Olivia Hulot – DRASSM
Marnix Pieters – Flanders Heritage Agency
Kathy Belpaeme – Coordinatiepunt Duurzaam Kustbeheer
Hans Peeters – GIA-Groningen

3. External Personnel, Contractors and Contributors
Robin McInnes
Loïc Langouët
Elias López-Romero
Andrew Williams
Roland Brooks
Jane Maddocks
Rob Scaife
Caroline Barrie-Smith
Peter Wilson
Jan Gillespie
Christin Heamagi
Brandon Mason
Edwige Motte
Dave Wendes
Latetia Le-Ru
Hervé Regnauld
Jason Sadler
Homme Zwaagstra

4. Technical Report Authors
The following acknowledgements for authorship recognise the specific contributions of individuals to the various sections of the report. Inevitably a large number of individuals have provided text and images to form this technical report. Further details on how to cite the case study reports are provided at the end of each report.

Editing and formatting: Julie Satchell & Lauren Tidbury

Section 1 Introduction: Julie Satchell, Lauren Tidbury, Robin McInnes, Tine Missiaen, Marie-Yvane Daire, Iason Jongepier, Garry Momber

Section 2 Methodology: Robin McInnes, Julie Satchell, Lauren Tidbury, Robin McInnes, Tine Missiaen, Marie-Yvane Daire, Iason Jongepier, Garry Momber

Section 3: Case Study Reports:

Case Study 3A East Anglia: Lauren Tidbury and Robin McInnes

Case Study 3B Kent: Lauren Tidbury, Stephen Fisher, Robin McInnes
**Case Study 3C Hastings:** Lauren Tidbury, Stephen Fisher, Robin McInnes

**Case Study 3D Solent & Isle of Wight:** Lauren Tidbury, Garry Momber, Jan Gillespie, Julie Satchell, Robin McInnes, with contributions from Tine Missiaen and Dimitris Evangelinos

**Case Study 3E West Dorset & East Devon:** Robin McInnes

**Case Study 3F West Cornwall:** Robin McInnes

**Case Study 3G North Cornwall:** Lauren Tidbury, Stephen Fisher, Julie Satchell,

**Case Study 3H Côte d'Emeraude:** Marie-Yvane Daire, Chloé Martin and Pau Olmos, with contributions from Loïc Langouët, Laetitia Le Ru, Edwige Motte, and Laurent Quesnel

**Case Study 3I Tregor & Northern Finistere:** Pau Olmos, Chloé Martin and Marie-Yvane Daire, , with contributions from Vincent Bernard, Loïc Langouët, Edwige Motte, Elias López-Romero and Laurent Quesnel.

**Case Study 3J Quiberon:** Marie-Yvane Daire, Chloé Martin and Pau Olmos, with contributions from Grégor Marchand, Catherine Dupont, Laetitia Le Ru, Edwige Motte, and Laurent Quesnel

**France General** - Fieldwork (in France) has been supported by:
- AMARAI (Association Manche Atlantique pour la Recherche Archéologique dans les Îles)
- UMR 6566 CReAAH (Centre de Recherche en Archéologie, Archéosciences, Histoire)
- OSUR (Observatoire des Sciences de l'Univers de Rennes)
- Ministère de la Culture
- Département du Morbihan

**Case Study 3L Ostend – Raversijde:** Tine Missiaen, Dimitris Evangelinos and Iason Jongepier. The research carried out for this case study was partly funded by different national and international projects, including the Flemish IWT project “Archaeological heritage in the North Sea (SeArch)”. The field work was done in collaboration with the Flemish Heritage Agency (Agentschap Onroerend Erfgoed), and the department of Soil Management from Ghent University (EMI data, Prof. M. Van Meirvenne). Captain and crew of the Last Freedom are gratefully acknowledged for their support in the marine surveys. Cor Verbruggen en Bregt Diependaele from Eijkelkamp are thanked for their crucial assistance with the hand augering. We also thank Ine Demerre, Oscar Zurita, Maikel De Clercq, Koen De Rycker, Samuel Delefortrie for their help with the field work and Marnix Pieters for his help with the report.

**Case Study 3M Scheldt Polders:** Tine Missiaen, Katrien Heirman & Iason Jongepier. The research carried out for this case study was co-funded by the Research Foundation Flanders (FWO), project “Archaeological exploration across the land-sea boundary in the Doelpolder Noord area (Westerschelde estuary): impact of sea-level rise on the landscape and human occupation, from the prehistory to medieval times”). The field work was done in close collaboration with the department of Archaeology from Ghent University (Prof. Ph. Crombé, J. Verhegge). VLIZ, DAB Vloot and Deltares (NL) are gratefully acknowledged for their logistic support of the marine and land seismic surveys. We thank Oscar Zurita, Maikel De Clercq, Koen De Rycker, Wim Versteeg and numerous students for their help with the field work and/or data processing. I. Jongepier wishes to thank the University Research Fund (Bijzonder Onderzoekfonds - BOF) for additional co-funding.
Case Study 3N Netherlands: Peter C. Vos, F.D. Zeiler, Yurie Eijskoot, Frans P.M. Bunnik, Holger Cremer, Kim M. Cohen, Tine Missiaen & Iason Jongepier. The fieldwork has been conducted in several campaigns, and by several institutions, including the Port of Rotterdam and BOOR.”

Section 4 Analysis: Lauren Tidbury, Julie Satchell, Robin McInnes, Marie-Yvane Daire, Tine Missiaen, Iason Jongepier, Edwige Motte.

Section 5 Conclusions: Robin McInnes, Lauren Tidbury, Julie Satchell
List of Figures

Section 1. Introduction

Figure 1.1. Arch-Manche case study areas and partners.

Figure 1.2. Summary geological map of the coastline of the Channel-Southern North Sea.

Figure 1.3. Chalk cliffs at The Needles, Isle of Wight, UK.

Figure 1.4. The spectacular chalk cliff landforms of the Côte d’Albâtre, Etretat, Upper Normandy.

Figure 1.5. The famous Chesil Beach shingle spit in Dorset, UK, links the Isle of Portland to the adjacent coast.

Figure 1.6. Low lying coastal communities along the Channel – Southern North Sea coasts are vulnerable to flooding aggravated by sea level rise & post-glacial land settlement.

Figure 1.7. The hard rock coastline of Brittany in north-west France.

Figure 1.8. Photo of Fairlight near Hastings on the coast of East Sussex, UK.

Figure 1.9. Dunes and beach – the Zeeland coast.

Figure 1.10. The beach at Knokke, Belgium.

Figure 1.11. Lithics from the Palaeolithic site of Fermanville, France.

Figure 1.12. Left: worked and channelled timber recovered from Bouldnor Cliff. Right: Collection of flint flakes recovered from Bouldnor Cliff.

Figure 1.13. Excavation of the Neolithic Groh-Colle site on the coast of Brittany, France.

Figure 1.14. Coastal scene at St Helens, Isle of Wight, UK.

Figure 1.15. Lulworth Cove, Dorset’ by William Daniell RA, 1825. Aquatint.

Figure 1.16. ’Mevagissey, Cornwall’ by William Daniell RA, 1825. Aquatint.

Figure 1.17. ’The Beach at Scheveningen’ by Adriaen van de Velde. Oil on canvas, 1658.

Figure 1.18. ’On the South Devon Coast’ by Samuel Edward Kelly, c.1910. Watercolour.

Figure 1.19. ’Vue de la Plage de Dieppe’ by Edouard Hostein (1804-1889). Oil on canvas.

Figure 1.20. ’Pegwell Bay, Kent – a recollection of October 5th 1858’ by William Dyce (1806-1864).

Figure 1.21. ’Yarmouth’, 1891. Watercolour. Charles Robertson (1844-1891).

Figure 1.22. ’Katwijk Church, Netherlands’. Image courtesy Cdr J Morton Lee.

Figure 1.23. Typical T-O maps as found during the Middle Ages.

Figure 1.24. Territorial map of the district of Bruges (Franc de Bruges) by Pieter Pourbus, 1561-71

Figure 1.25. Victorian seaside developments at Hastings, East Sussex, UK, c.1890.

Figure 1.26. Bathing machines line the beach at Ventnor, Isle of Wight, UK, c.1900.

Figure 1.27. Storm surges create huge waves in Freshwater Bay on the Isle of Wight during storms in January 2014.

Figure 1.28. Coastal Hazards, Human Activity and Risk

Figure 1.29. The village of Blackgang on the south west coast of the Isle of Wight, UK.

Figure 1.30. Newtown National Nature Reserve on the Isle of Wight, UK.
Figure 1.31. Dune coast near Ijmuiden, Netherlands.

Figure 1.32. Hurst Spit, Hampshire, UK

Figure 1.33. The city of Portsmouth, Hampshire.

Figure 1.34. Some important studies that have provided valuable data and information on coastal hazards and risks.

Figure 1.35. Coastal monitoring programmes provide valuable data to inform coastal risk management.

Figure 1.36. Chalk cliffs at Criel-sur-Mer, Upper Normandy.

Figure 1.37. Vulnerable coastal villas at Mesnil-Val, Upper Normandy.

Section 2. Methodology

Figure 2.1. View of the Western Solent case study area.

Figure 2.2. Bonchurch, Isle of Wight, UK. Edward William Cooke RA, oil on canvas c1850.

Figure 2.3. ‘A Beach Scene at Southwold, Suffolk’ by Thomas Smythe (1825-1904). Oil on canvas.

Figure 2.4. The coastline at Luccombe, Isle of Wight.

Figure 2.5. ‘The Old Undercliff Road, Niton, Isle of Wight’ by George James Knox.

Figure 2.6. ‘The Harbour, Lowestoft, Suffolk’ by Alfred Robert Quinton. Watercolour, c.1920.

Figure 2.7. Examples of the depiction of the division of supra-, inter- and sub-tidal areas within estuaries and tidal basins.

Figure 2.8. Examples of the depiction of inlets within cliff coasts: left = well depicted, right = depicted.

Figure 2.9. Examples of depiction of division of dunes and beaches on sandy coasts.

Figure 2.10. Program interface MapAnalyst.

Figure 2.11. Ranking of maps based on chronometric accuracy.

Figure 2.12. The Kernic beach and prehistoric passage grave.

Figure 2.13. Location of dive sites in the Solent, UK.

Figure 2.14. Diver at work on the site of Bouldnor Cliff.

Figure 2.15. Location of intertidal sites in the UK.

Figure 2.16. The RTK GPS system in use on a timber structure off Hayling Island.

Figure 2.17. Location of Intertidal Excavations in France.

Figure 2.18. Location of geophysical and geotechnical investigations.

Figure 2.19. Marine seismic reflection principle.

Figure 2.20. Art field studies.

Figure 2.21. The Arch-Manche database schema.

Figure 2.22. Form view of the Arch / Palaeoenvironmental table via the web-interface.

Figure 2.23. The Arch-Manche Geoportal
Section Three – Case Studies.

Figure 3.1 Location of the fourteen Arch-Manche case study areas and the partner organisations.

Figure 3A16. Map of the East Anglia Study Areas

Figure 3A17. Reconstruction of the Dunwich boundary.

Figure 3A18. Map showing the distribution of all archaeological and palaeoenvironmental sites within the East Anglia study area

Figure 3A19. Map showing distribution of highest ranking archaeological and palaeoenvironmental sites within the East Anglia study area

Figure 3A20. Location of historic photos in the East Anglia case study area

Figure 3A21. Location of the two maps assessed along the East Anglian coastline.

Figure 3A22. Location of the artistic depictions.

Figure 3A23. ‘Cromer Beach’ by John Varley, watercolour 1802.

Figure 3A24. ‘Cromer’ by John Moore of Ipswich, c.1850, oil on canvas.

Figure 3A25. ‘Cromer’ by John Moore of Ipswich, c.1850, oil on canvas.

Figure 3A26. ‘Yarmouth Jetty, Norfolk’. Rock & Co., 1850

Figure 3A27. ‘Yarmouth’ by Edward William Cooke, RA, 1838, steel engraving

Figure 3A28. ‘Gorleston, Suffolk’. Joseph Lambert, 1822. Copper plate engraving.

Figure 3A29. ‘Pakefield’ by Alfred Stannard, 1882, oil on canvas.

Figure 3A30. Coastal instability at Pakefield, early twentieth century.

Figure 3A31. ‘Southwold’ by Helen Clarke, 1899, watercolour.

Figure 3A32. ‘Wreck of the Princess Augusta on Southwold Beach’ by J. B. Ladbrooke, 1838.

Figure 3A33. ‘The beach at Southwold’ by Thomas Smythe’, c.1860, oil on canvas.

Figure 3A34. ‘Southwold Harbour’ by William Daniell, RA, 1822, aquatint.

Figure 3A35. ‘Slaughden Quay’ by John Moore of Ipswich, 1883, oil.

Figure 3A36. ‘Orford Ness Lighthouse, Suffolk’ by William Daniel, RA, 1822, aquatint.

Figure 3A37. Covehithe.

Figure 3A38. The use of historic maps and paintings.

Figure 3A39. The lighthouses at Orford Ness depicted in 1783, 1822, 1880 and 2013.

Figure 3A40. 1st Edition OS Map showing the high water mark at Happisburgh.

Figure 3B41. Map of the Kent study areas.

Figure 3B42. Map showing the distribution of archaeological and palaeoenvironmental sites within the Kent study area

Figure 43B3. Map showing the distribution of highest ranking archaeological and palaeoenvironmental sites within the Kent study area.
Figure 3B4. Map showing the distribution of artworks ranked within the Kent case study area.

Figure 3B5. The image on the left is a map of Dover from 1661 the image on the right is an aerial photograph of Dover from 2013.

Figure 3B6. Map of the Isle of Thanet from 1836, from John Dower in Thomas Moule’s The English Counties Delineated.

Figure 3B7. Reculver Church’, North Kent coast by William Daniell, RA engraved in 1824.

Figure 3B8. Charles Lyell cited the Roman shore fort of Regulbium (i.e. Reculver) as evidence of the scale and rate of marine erosion.

Figure 3B9. Lyell’s view of 1834 shows the significant retreat of the shoreline since the previous engraving (above) was made in 1781.

Figure 3B440. The Reculver’, commonly called ‘The Two Sisters’ by James Malton, 1798.

Figure 3B11. The Rev. J. Skinner recorded the wall of the Roman fort at Reculver in his diary around 1813 after the cliff had been drastically undercut by erosion.

Figure 3B452. In this view of Reculver by James Ward painted in 1818 a range of coastal defences can be seen at the foot of the soft cliff line.

Figure 3B463. A further view of Reculver Church from the east side by Stewart Westmacott painted in 1851.

Figure 3B474. ‘Margate’ by William Daniell engraved in 1824.

Figure 3B485. The present day view of Margate

Figure 3B496. ‘Pegwell Bay – Recollections of 5th October 1858’ by William Dyce, RA.

Figure 3B507. The chalk cliff frontage at Pegwell Bay today

Figure 3B518. Deal Castle’ by William Daniell, RA engraved in 1824.

Figure 3B19. In his view of ‘Walmer Castle’ (1824) Daniell provides us with an extensive and detailed depiction of the shoreline and cliffs.

Figure 3B520. An oil painting by Henry Pether (c.1852)

Figure 3B531. The Leas Cliff Hall in about 1900.

Figure 3B542. Photograph taken in 1900

Figure 3B553. The present day view, shows the coastal slope, which has faced some instability problems and the upgraded coastal defences including rock groynes.

Figure 3B564. William Stukeley’s ‘bird’s eye view’ of the southern forts, showing Deal Castle (foreground) and Walmer Castle. 1725.

Figure 3B575. War Department plan of Walmer Castle (1725)

Figure 3B586. Wenceslaus Hollar’s engraving of Deal Castle, 1824.

Figure 3B597. Ordnance Survey maps of Deal Castle.

Figure 3B608. Two views of Sandown Castle; a plate from the London Illustrated News, 1853 and; a Royal Engineer Map from 1860-1865.
Figure 3B29. Sandown castle seen from the beach in the early 1900's.

Figure 3C61. Map of the Hastings Study Areas.

Figure 3C62. Map showing the distribution of archaeological and palaeoenvironmental sites within the Hastings study area.

Figure 3C63. Location of artistic depictions ranked.

Figure 3C64. Location of historic photos assessed within the Hastings study area.

Figure 3C65. Location of the historic map ranked within the Hastings case study area.

Figure 3C66. ‘Rescue at Hastings’ by William George Moss, 1814.

Figure 3C67. An oil by the prolific Hastings artist, William Henry Burrow, dated 1885.

Figure 3C68. A further oil by W. H. Borrow, dated 1879.

Figure 3C69. An oil by Edwin Hayes entitled ‘Old Hastings’, 1880.

Figure 3C70. ‘Remains of the Elizabethan Harbour at Hastings’ by Charles A. Graves, 1901.

Figure 3C71. A woodcut, circa 1880, showing the beach and fishing village.

Figure 3C72. A detailed watercolour of the eastern end of Hastings beach in about 1920 by Alfred Robert Quinton.

Figure 3C73. This lithograph, published in about 1850, looks westwards from below the cliffs and shows the fishing village and town beyond.

Figure 3C74. A panoramic view by W. H. Borrow from the top of the cliffs looking westwards in 1881.

Figure 3C75. Aerial photo of Hastings showing the high ranking submerged forests of Little Galley Hill and Bulverhythe within the Hastings study area.

Figure 3C76. A view from Hastings Beach, comparison of the high ranking 1920’s painting (Courtesy J. Salmon Ltd) with a current photo (copyright N Chadwick).

Figure 3C77. The image on the left shows the view eastwards from Willowpit Wood, the Fairlight coastguard station can be seen in the distance (red star), the modern image on the right shows the current position of the coastguard station in the background, and the approximate position of the photographer above Willowpit Wood in the foreground.

Figure 3C78. Historic OS Maps from 1875-1938.

Figure 3C79 (A&B). The top photo (A) shows Hastings Harbour Arm in 1918, below (B) is a present day aerial image.

Figure 3C80. Plan of Hasting and St Leonards (left) Bacon 1890. Aerial photo of the same area, the yellow box marks the area covered by the 1890 plan (right).

Figure 3C81. 1st Edition OS Map overlaid on 2013 photography. The red arrow depicts the changing high water mark.

Figure 3D82. Map of the Solent and Isle of Wight Case Study Area.

Figure 3D2. Damage caused by the storms in January 2014.

Figure 3D3. Map showing the distribution of archaeological and palaeoenvironmental sites within the Solent study areas.
Figure 3D4. Map showing distribution of highest ranking archaeological and palaeoenvironmental sites within the Solent study area.

Figure 3D5. Location of dive sites in the Solent, UK

Figure 3D6. Location of intertidal sites in the Solent, UK

Figure 3D7. White chalk cliffs on the south west side of the Isle of Wight

Figure 3D8. Map of the Solent study area showing the places mentioned in the text.

Figure 3D9. Images showing the development of the western Solent.

Figure 3D10. A 3,800 year old palaeo-landsurface lying just 0.5m below Chart Datum remains protected on the east side of Hurst Spit (this side of the Spit in the image).

Figure 3D11. Active erosion and rotational sliding forming a cliff along the north edge of Victoria Country Park.

Figure 3D12. Fallen trees below Bouldnor Hill resulting from cliff erosion

Figure 3D13. Saltmarsh and mudflat regression from 1781, 1934, 1991 and 2013 based on the analysis of historic maps.

Figure 3D14. Erosion and degradation accentuated by marine boring is evident within the relatively recently exposed submerged landscapes in the north-west Solent.

Figure 3D15. Schematic across Bouldnor Cliff showing the sediment layers and relict submerged landsurface at the base of the cliff.

Figure 3D16. The 8-9m high submerged cliff at Bouldnor runs for 1km along the edge of the Solent channel parallel with the shore.

Figure 3D17. Annotated bathymetric survey conducted in 2003.

Figure 3D18. Sample being recovered by divers from prehistoric landscape site.

Figure 3D19. 60 cm wide, eight thousand year old, oak tree on seabed at BC-II recorded in 2003.

Figure 3D20. Area of seabed inspected and surveyed at BCII.

Figure 3D21. The darkened area within the survey grid had been subject to greatest erosion since 2003/4.

Figure 3D22. Two bathymetric surveys conducted of the same area show plans 10 years apart. The different colours represent different depths.

Figure 3D23. An undercut running 1.1m beneath the peat cover. It is located at the western end of the survey area.

Figure 3D24. Loose worked flints recovered by divers following their discovery on the seafloor at Bouldnor Cliff.

Figure 3D25. Interface between the peat deposit and the underlying fine sandy silt.

Figure 3D26. The surface of the fine sandy silt matrix shown shortly after it was exposed but before sampling and excavation

Figure 3D27. Three clusters of flints were noted at the base of the evaluation trench.

Figure 3D28. A selection of flakes and bladelets recovered during the fieldwork in 2012/13.

Figure 3D29. A selection of cores recovered during the fieldwork in 2012/13.

Figure 3D30. Caudal view of the Auroch trichlae that was recovered from the eroded landscape at Bouldnor Cliff-II.
Figure 3D31. Erosion monitoring plan of BC-V.

Figure 3D32. Undersides of split and worked timber from BC-V.

Figure 3D33. Opposite side of the two split timbers recovered in 2014.

Figure 3D34. Plan of the wood working site at BC-V.

Figure 3D35. The 1.1m long timber recovered in 2012 was found lying perpendicular to the hypothesised log boat where it would have provided support at its southern end.

Figure 3D36. Close up of the distinctive cut o.7m from the base of the recovered timber.

Figure 3D37. A smaller piece of fashioned and worked timber was recovered from the floor of the trench extended in 2012.

Figure 3D38. Peat deposits in north west Solent are signified by the hashed boxes.

Figure 3D39. Section at the top of the 1.5m high cliff off Tanners hard.

Figure 3D40. The railway wheel that is used as a sinker and monitoring point for cliff erosion.

Figure 3D41. The loss of mudflats from the north west Solent have reduced protection for the coastline.

Figure 3D42. Layers of wattle that would have been laid beneath the jetty infill are now exposed and eroding.

Figure 3D43. Pollen diagram from Sample HS01, off Hurst Spit, Hampshire.

Figure 3D44. Bathymetric data showing the seabed west of Hurst Spit.

Figure 3D45. Close up of the bathymetric data highlighting the peat deposit on the seabed west of Hurst Spit.
